MAESTRO4Police

Smart Incident Management
for Law Enforcement Agencies

MAESTRO4Police is an incident management platform developed to address the operational needs of Municipal Police and law enforcement agencies.

By digitizing workflows and eliminating repetitive paperwork, MAESTRO4Police enables police forces to manage, monitor, and report incidents efficiently and in real time empowering teams to respond faster and operate smarter.

From field operations to command-level oversight, MAESTRO4Police gives police agencies the tools to increase productivity, improve accountability, and deliver safer communities through data-driven policing.

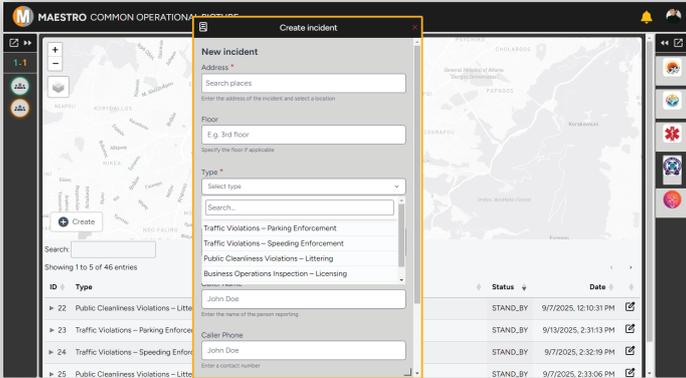

IANUS
TECHNOLOGIES

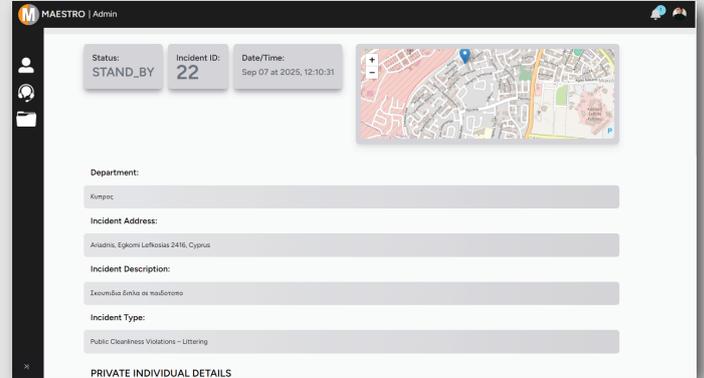

MAESTRO4Police Design & Functionality

-  **Real-time geographic tracking:** Imaging of incidents and the teams acting in order to provide immediate situational awareness at the receiving centre.
-  **Comprehensive incident monitoring:** Track every stage of an incident's lifecycle with detailed logs from incident call through to incident completion and audit report.
-  **Personnel management:** Ability to check staff availability in real time.
-  **Statistical incident analysis:** Complete insight into incidents and audit reports through statistical data analysis to better police and support policy decisions and strategic planning.
-  **Advanced incident search:** Search actions and incident histories with multiple criteria for quick access to relevant data.
-  **Integrated message communication:** Direct communication with the command control centre via specially designed and encrypted messaging.
-  **Automated incident report generation:** Automatically generated based on the incident control reports.
-  **Centralized contact directory:** Organized telephone directory to efficiently manage key contacts.
-  **On-the-Spot Printing of Violation Notices:** The platform supports integration with mobile printers, enabling the issuance and immediate handover of violation notices directly on site.
